<sup>1)</sup> If you use a F-CPU as PROFINET IO-Controller, the "Failsafe" function and "Isochronous mode" function should not take place together in one IO device.

<sup>2)</sup> The CPU supports the "Isochronous mode" function only as IO controller.

<sup>3)</sup> The function is only supported over CP 1616 or CP 1604.

<sup>4)</sup> With S7-400 Industrial Ethernet CPs the PROFINET functions don't only depend on the firmware version of the module, but also on the adopted CPU and their firmware version.

This is described in the manual of the relevant Industrial Ethernet CP.

<sup>5)</sup> The function is only supported in single mode.
